

SUMMARY

Information Technology graduate with hands-on experience building Laravel and React applications during internships and academic projects. Experienced in developing ERP modules, REST APIs, database-driven systems, and responsive user interfaces.

TECHNICAL SKILLS

Core Web Stacks:	PHP (Laravel), React (TypeScript, JavaScript), Node.js, HTML5, CSS3
Mobile & Systems:	Flutter (Dart), C++ (C++20), CMake, Win32 API
Databases & Tools:	MySQL, SQLite, Git, System Deployment, RESTful APIs, ONNX Runtime
Languages:	English (Professional Working Proficiency) Filipino (Native or Bilingual Proficiency)

PROFESSIONAL EXPERIENCE

Cornersteel Systems Corporation	Mandaluyong City, PH
Full-Stack Developer Intern	Laravel, React, Flutter, MySQL
- Engineered a production-ready, automated industrial web module optimizing complex ERP document compilation and cloud-to-print industrial pipelines, accelerating high-volume corporate printing execution. - Designed and integrated a cross-platform Flutter application featuring robust administrative task controls, budget calculations, and credential vaults connected to an AI-driven productivity service. - Collaborated in agile development sprints to perform comprehensive code reviews, write test scripts, and eliminate critical architectural vulnerabilities, maximizing system uptime across version rollouts.	

SELECTED PROJECTS

Automated Tax Declaration System (JRU Project)	Mandaluyong City, PH
Development Team Lead	PHP (Laravel), MySQL, JavaScript
- Spearheaded the architectural blueprint and full-stack development of an Automated Tax Declaration System, introducing multi-tier role routing and custom cryptographic security workflows. - Engineered the core automated treasury processing engine, optimizing financial ledger computation and data tracking modules via data models to guarantee transactional integrity.	

DevTrack	Github Repo
Full-Stack Web Developer	PHP (Laravel), React, MySQL, REST APIs, Tailwind CSS
- Engineered a secure email-verification registration flow in a Laravel API & React web app, implementing a stateless OTP (One-Time Password) system caching codes (15-minute TTL) using the Laravel database cache driver to authenticate users before registration. - Integrated transactional mail services using Gmail SMTP and Google App Passwords, resolving scheme compatibility bugs with Symfony Mailer, and crafting a high-fidelity, responsive HTML blade email template for OTP delivery. - Integrated third-party job feed APIs (JSearch) to ingest and query local Philippine software engineering jobs in real-time, building a robust mapping service to sanitize and seed external job data into the database. - Developed a custom, animated React Modal dialog system leveraging Lucide icons and Tailwind CSS v4 backdrop blur effects to replace standard browser alert dialogs, significantly improving UX and interface consistency.	

AdaptED – Student Adaptability Predictor	Github Repo
Full-Stack Developer / Contributor	PHP (7.4+), MySQL, HTML5, CSS3, JavaScript (ES6), Python ML API (Render)
- Engineered a role-based web application enabling students to assess and track their adaptability levels for online learning using a Python-based Machine Learning prediction API. - Designed and built an Educator-Student relation system using a unique invite code mechanism, allowing real-time data sharing and progress monitoring. - Developed analytical dashboards featuring aggregate student statistics, distribution charts, and prediction logs to assist educators in analyzing student performance trends. - Formulated security-first backend features using PHP prepared statements to prevent SQL Injection, secure sessions, and implemented password_hash() for user authentication. - Created a lightweight custom JavaScript modal and notification library (modal.js), improving user experience (UX) and eliminating standard browser alert/confirm dialogues.	

AI-Powered File & Backup Architect	Github Repo
Core Developer	C++20, DirectX 11, SQLite, ONNX Runtime, Win32 API
- Built an asynchronous desktop sorting system utilizing regex modules combined with an embedded local Logistic Regression model to instantly classify thousands of system elements into explicit logic trees. - Engineered a fully non-blocking multi-threaded processing layer paired with persistent local SQLite caching schemas to support deep transaction isolation and instantaneous state rollbacks.	

EDUCATION

Jose Rizal University	Aug 2022 — Jun 2026
Bachelor of Science in Information Technology	

SEMINARS & CERTIFICATIONS

PSITE-NCR Student Congress – Professional Information Technology Symposium	2026
AI for Good Student Program – Artificial Intelligence, Security & Ethics Seminar	2025
